

# Vaulted Wine

Sell securely cellared wines to collectors across the world

## Trade wine effortlessly

Collectors want to own your wine, not store it. The best wines should be cellared for decades, but many wine enthusiasts do not have adequate facilities.

**Vaulted** allows wine lovers to collect, trade, and enjoy fine wines without the hassle of cellar-condition storage and shipping on each trade.

**Vaulted's** secure digital NFT certificates let collectors own fine wines (with full provenance and storage history) without any bottle leaving the cellar until the day it is ready to be enjoyed.

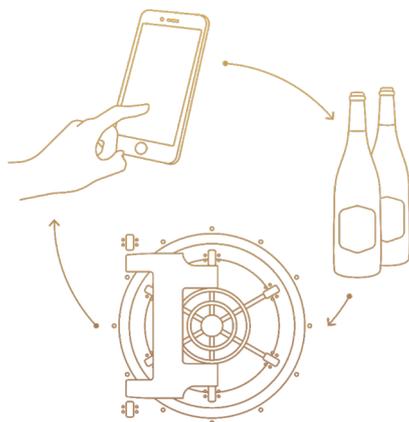

Wines are consigned to a regional vault for storage in perfect conditions, and traded online.

## Introducing the Lourensford Vault

**Vaulted Wine** has partnered with the **Lourensford Wine Estate** in Somerset West to become a leading wine vault for secure NFT-based trading. Wine producers are invited to consign wines to the vault for listing. **Vaulted** promotes these wines at no risk to the consigning cellar. Wine collectors can build up their portfolio of fine wines on the **Vaulted Wine** marketplace. The wines are kept in the vault until redeemed by the NFT holder. Until then each case may be traded freely – and the consigning cellar receives a royalty on all secondary market trades.

## Benefits of selling fine wine NFTs

- The consigning producer retains full ownership of each case of wine until its NFT (ownership certificate) is sold.
- The consigner can list wines at market-related prices.
- **88.5%** of the list price goes directly to consigner; the balance is the vault and the online platform's commission.
- The producer receives **1%** of all future trades, indefinitely.
- Unsold cases can be returned to the consigner at any time.
- The storage and trading of wine NFTs promote fine wine as both a luxury to enjoy and a tradeable investment.
- Online trading exposes local wine to international buyers.

“The wine industry has an exceptional opportunity to use emerging blockchain technology to their advantage. By separating ownership from physical possession, a fine wine becomes an asset that can be collected and traded effortlessly until it's ready to be collected and enjoyed – perhaps decades in the future.”
